Summary

Computer Science student skilled in JavaScript, C++, algorithms, and software development with hands on experience in AI/ML. Seeking opportunities to leverage technical expertise and contribute to impactful and innovative solutions.

Education

Jaypee Institute of Information Technology, Noida
B.Tech in Computer Science
GPA: 9.0/10.0

Expected May 2027

Skills

Languages: C, C++, JavaScript, Python, PHP

Core Skills: Data Structures and Algorithms, Full Stack Development, Software Development, Database Management

Web & Frameworks: HTML, CSS, MERN Stack, GraphQL, Prisma

Tools & Platforms: Git, GitHub, Docker, Postman, XAMPP, MySQL, PostgreSQL, Jupyter Notebook, AWS

AI/ML: Machine Learning, Deep Learning

Experience

Software Engineer Intern, Bluestock (Certificate)

Dec 2024 – Jan 2025

Worked on the development of multiple production-level software systems. Implemented secure authentication mechanisms including LinkedIn OAuth and Microsoft OAuth, and developed backend services with efficient database integration using PostgreSQL.

Projects

Path-Finder

Github Link
🔗

- Developed an interactive Algorithm Visualizer using React.js, JavaScript, HTML, and CSS, implementing and animating BFS, DFS, Dijkstra's, and A* pathfinding algorithms with smooth real-time visualizations, dynamic obstacle generation, and draggable source and destination nodes.

Movie Review Sentiment Analysis (RNN)

Github Link
🔗

- Developed a deep learning model using Recurrent Neural Networks (RNN) to classify movie reviews into positive or negative sentiment, implementing text preprocessing including tokenization, sequence padding, and word embeddings before training the model using TensorFlow.

EVENTORY

Github Link
🔗

- Developed EVENTORY, a MERN stack web application that enables users to discover live events using city and date filters. Integrated the Ticketmaster API to fetch real-time event data and display event details through a responsive React interface.

Customer Churn Prediction(ANN)

Github Link
🔗

- Implemented a customer churn prediction system using an Artificial Neural Network built from scratch with Python and NumPy. Performed data preprocessing and feature normalization, and trained the model using forward propagation and backpropagation to predict customer retention.

Achievements & Leadership

- Encode 2.0 Contest Winners. 🔗
- Served as a Core Member of *Nrityang (Dance Hub)*, coordinating teams and supporting the planning and execution of college and inter-college performances.
- Awarded *Student of Excellence* and merit-based scholarship by M.P. Council of Science and Technology.
- 2 star at Codechef. 🔗
- Secured Global Rank 670 in CodeChef Starters 213 and Global Rank 765 in CodeChef Starters 206.
